Reply to Notice of Allowance dated November 18, 2004

Amendments to the Specification:

Please replace the paragraph beginning at page 10, line 28, with the following redlined paragraph:

The facility preferably utilizes a plain-language, hierarchical, taxonomic attribute nomenclature to name attributes. The attribute names within the nomenclature are preferably specific so that there is no ambiguity as to what they represent. The facility preferably supports the extension of the nomenclature by adding new attribute names that conform to the hierarchical taxonomy of the nomenclature. The nomenclature preferably has attribute names relating to the user, such as user.position, user.speed, and user.direction, providing information about the user's position, speed, and direction, respectively. The nomenclature preferably contains attribute names for various user moods, such as user.mood.happiness, user.mood.anger, and user.mood.confusion. The nomenclature preferably includes attribute names for user activities, such as user.activity.driving, user.activity.eating, and user.activity.sleeping. The nomenclature preferably includes attribute names for user physiology values, such as user.physiology.pulse, user.physiology.body_temperature, and user.physiology.blood_pressure. The nomenclature preferably includes attribute names for similar attributes of people other than the user, such as person.John_Smith.mood.happiness. The nomenclature preferably includes attribute names for aspects of the computer system or "platform." For example, the nomenclature preferably includes attribute names for aspects of the platform's user interface, such as platform.user_interface.oral_input_device_availability and platform.user_interface.visual_output_device_availability. The nomenclature preferably includes attribute names for attributes relating to the central processing unit, or "CPU," of the platform, such as platform.cpu_load and platform.clock_speed. The nomenclature preferably also provides attribute names for aspects of the local environment, such as environment.local.time, environment.local.temperature, and environment.local.ambient_noise_level. The nomenclature preferably also includes attribute names for remote environments, such as environment.place.chicago.time and environment.place.san_diego.temperature. The nomenclature preferably further provides

attribute names relating to specific applications. For example, the nomenclature preferably provides attribute names for aspects of an electronic mail application, such as application.mail.available, application.mail.new_messages_waiting, and application.mail.messages_waiting_to_be_sent. In this manner, the attribute nomenclature used by the facility provides effective names for attributes relating to the user, the computer system, and the environment. ~~Additional detail on the attribute nomenclature utilized by the facility is provided in U.S. Patent Application No. _____, entitled "Supplying User Context Data With Dynamically Specified Suppliers and Consumers," which is hereby incorporated by reference in its entirety.~~
